Subject: Malondialdehyde determination in TES

From: Rustemeier, Klaus

Dear Robin:

I discussed the article you gave me with Peter Kuhl. Peter is responsible for Clinical Chemistry at INBIFO and has been a lot interested in oxidative stress markers including MDA. He suggests to use a literature method, which is described to be suitable for determinations in urine. He particularly mentioned the following article:

Draper, H.H., and Hadley, M. Malondialdehyde determination as index of lipid peroxidation, Methods in Enzymology 186, 421 – 431 (1990)

If you have further questions from this area, I would like to suggest contacting him directly.

Regards,
Klaus
